

New remote commissioning service

Every day closer to our customers

At Gamesa Electric we want to be closer to our customers. Our new remote testing service allows access to the process of control and acceptance of our equipment in a comfortable and simple way.

This tool allows interactive viewing of the data and real-time status of the tests in progress.

The new remote testing service joins other digitalisation initiatives, such as our augmented reality support, which provides real-time technical and training assistance for specific processes.

We work every day with the aim of being closer to our customers, providing optimised solutions to provide the best service in a faster and more convenient way.
